## **Anal Fistula Coring Device ProctoCor (Code 1001)**

Welcome to the Anal Fistula Coring Device product manual. It intends to serve as a guide for the safe and effective use of Proctocor in the management of anal fistulas.

### **Device Description**

The Anal Fistula Coring Device is a versatile tool designed for precise cutting and coring of fistulous tracts. Its availability in 8 different diameters allows it to accommodate various tract sizes, making it suitable for a wide range of cases. Made of high-quality materials, it ensures durability and reliability. It can be used in linear and curvilinear tracts, further enhancing its versatility and empowering the user with a comprehensive solution.

The device has a standard length of 7.5 inches and is available in different diameters of 4mm, 4.5mm, 5mm, 5.5mm, 6mm, 6.5mm, 7mm, and 7.5mm.

# Product Manual

## Know about the Instrument

**Malleable probe:** This tool is designed for easy manipulation of the fistula tract and insertion of the coring device, to facilitate the coring process.

**Shaft:** The device has a shaft of 2.5mm diameter and a standard length of 12 inches. It has been designed for the smooth movement of the cutter while coring out tracts of smaller diameters.

**Base Plate:** This component provides resistance at the internal opening to ensure complete transection of the fistula tract, aiding in the thorough coring process.

**Circular blade:** It allows precise and uniform coring.

### Number of pieces (12)

- Eight circular blades ranging from 4mm to 7.5mm
- One base plate
- One shaft of 2.5mm
- Two malleable probes of different sizes
